## Keysight

E4981A Capacitance Meter

Data Sheet

## Definitions and Specifications

This document provides specifications and supplemental information for the Keysight Technologies, Inc. E4981A capacitance meter. All specifications apply to the conditions of a $0^{\circ} \mathrm{C}$ to $45^{\circ} \mathrm{C}$ temperature range, unless otherwise stated, and 30 minutes after the instrument has been turned on.

## Definitions

Specification (spec.): Warranted performance. Specifications include guard bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Supplemental information is intended to provide information that is helpful for using the instrument but that is not guaranteed by the product warranty.

Typical (typ.): Describes performance that will be met by a minimum of $80 \%$ of all products. It is not guaranteed by the product warranty.

A general descriptive term that does not imply a level of performance.

The available frequency is defined as follows.

$$
\begin{aligned}
& \text { E4981A-001: } 120 \mathrm{~Hz} / 1 \mathrm{kHz} / 1 \mathrm{MHz} / 1 \mathrm{MHz} \pm 1 \% / 1 \mathrm{MHz} \pm 2 \% \\
& \text { E4981A-002: } 120 \mathrm{~Hz} / 1 \mathrm{kHz}
\end{aligned}
$$

The information regarding "Frequency $1 \mathrm{MHz} / 1 \mathrm{MHz} \pm 1 \% / 1 \mathrm{MHz} \pm 2 \%$ " in specifications, supplemental and general information in not valid for the E4981A-002.

## Basic specifications

where

Cp: Capacitance value measured using the parallel equivalent circuit model
Cs: Capacitance value measured using the series equivalent circuit model
D: Dissipation factor
0: Quality factor (inverse of D)
G: Equivalent parallel conductance measured using the parallel equivalent circuit model
Rp: Equivalent parallel resistance measured using the parallel equivalent circuit model
Rs: Equivalent series resistance measured using the series equivalent circuit model

Measurement

Measurement signals

| Frequency | Allowable frequencies | 120 Hz |
| :---: | :---: | :---: |
|  |  | 1 kHz |
|  |  | 1 MHz |
|  |  | 0.98 MHz ( $1 \mathrm{MHz}-2 \%$ ) |
|  |  | $0.99 \mathrm{MHz}(1 \mathrm{MHz}-1 \%)$ |
|  |  | $1.01 \mathrm{MHz}(1 \mathrm{MHz}+1 \%)$ |
|  |  | $1.02 \mathrm{MHz}(1 \mathrm{MHz}+2 \%)$ |
|  | Accuracy | $\pm 0.02 \%$ |
| Level | Range | 0.1 V to 1 V |
|  | Resolution | 0.01 V |
|  | Accuracy | $\pm 5 \%$ |
| Output mode | Continuous or Synchronous |  |
| Source delay time ${ }^{1}$ | Range | 0 to 1 s |
|  | Resolution | 0.1 ms |

[^0]Measurement time selection: $\quad 5$ speeds measurement time mode $N=1,2,4,6,8$
For information on the measurement time in each mode, refer to Table 15 "Measurement time."

Measurement range selection: Auto, Hold

Measurement range:

| Measurement signal frequency: | 10 nF | 22 nF | 47 nF | 100 nF |
| :--- | :--- | :--- | :--- | :--- |
| 120 Hz | 220 nF | 470 nF | $1 \mu \mathrm{~F}$ | $2.2 \mu \mathrm{~F}$ |
|  | $4.7 \mu \mathrm{~F}$ | $10 \mu \mathrm{~F}$ | $22 \mu \mathrm{~F}$ | $47 \mu \mathrm{~F}$ |
|  | $100 \mu \mathrm{~F}$ | $220 \mu \mathrm{~F}$ | $470 \mu \mathrm{~F}$ | 1 mF |
| Measurement signal frequency: | 100 pF | 220 pF | 470 pF | 1 nF |
| 1 kHz | 2.2 nF | 4.7 nF | 10 nF | 22 nF |
|  | 47 nF | 100 nF | 220 nF | 470 nF |
|  | $1 \mu \mathrm{~F}$ | $2.2 \mu \mathrm{~F}$ | $4.7 \mu \mathrm{~F}$ | $10 \mu \mathrm{~F}$ |
|  | $22 \mu \mathrm{~F}$ | $47 \mu \mathrm{~F}$ | $100 \mu \mathrm{~F}$ |  |
| Measurement signal frequency: | 1 pF | 2.2 pF | 4.7 pF | 10 pF |
| $1 \mathrm{MHz} / 1 \mathrm{MHz} \pm 1 \% / 1 \mathrm{MHz} \pm 2 \%$ | 22 pF | 47 pF | 100 pF | 220 pF |
|  | 470 pF | 1 nF |  |  |

For information on measurable range in each measurement mode, refer to "Available measurement ranges" (Tables 2 through 4).

Averaging:

| Range | 1 to 256 measurements |
| :--- | :--- |
| Resolution | 1 |

Trigger mode:

Trigger delay time:

Measurement display ranges

Internal trigger (Int), Manual trigger (Man), External trigger (Ext), GPIB/USB/LAN trigger (Bus)

| Range | 0 to 1 s |
| :--- | :--- |
| Resolution | 0.1 ms |

Table 1 shows the range of the measured value that can be displayed on the screen.

Table 1. Allowable measured value display range

| Parameter | Measurement display range |
| :--- | :--- |
| Cs, Cp | $\pm 1.000000 \mathrm{aF}$ to 999.9999 EF |
| D | $\pm 0.000001$ to 9.999999 |
| Q | $\pm 0.01$ to 99999.99 |
| Rs, Rp | $\pm 1.000000$ a $\Omega$ to $999.9999 \mathrm{E} \Omega$ |
| G | $\pm 1.000000$ aS to 999.9999 ES |
| $\Delta \%$ | $\pm 0.0001 \%$ to $999.9999 \%$ |
| a: $1 \times 10^{-18}, \mathrm{E}: 1 \times 10^{18}$ |  |

Available measurement ranges

Tables 2 through 4 show recommended measurement ranges (recommended for accurate measurement) and significant measurement ranges (ranges that do not cause overload) for each measurement value under the condition D (dissipation factor) $\leq 0.5$.

Table 2. Measurable capacitance ranges when measurement frequency is 120 Hz

| Measurement <br> range setting | Recommended <br> measurement range | Significant measurement <br> range |
| :--- | :--- | :--- |
| 10 nF | 0 F to 15 nF | 0 F to 15 nF |
| 22 nF | 15 nF to 33 nF | 0 F to 33 nF |
| 47 nF | 33 nF to 68 nF | 0 F to 68 nF |
| 100 nF | 68 nF to 150 nF | 0 F to 150 nF |
| 220 nF | 150 nF to 330 nF | 0 F to 330 nF |
| 470 nF | 330 nF to 680 nF | 0 F to 680 nF |
| $1 \mu \mathrm{~F}$ | 680 nF to $1.5 \mu \mathrm{~F}$ | 0 F to $1.5 \mu \mathrm{~F}$ |
| $2.2 \mu \mathrm{~F}$ | $1.5 \mu \mathrm{~F}$ to $3.3 \mu \mathrm{~F}$ | 0 F to $3.3 \mu \mathrm{~F}$ |
| $4.7 \mu \mathrm{~F}$ | $3.3 \mu \mathrm{~F}$ to $6.8 \mu \mathrm{~F}$ | 0 F to $6.8 \mu \mathrm{~F}$ |
| $10 \mu \mathrm{~F}$ | $6.8 \mu \mathrm{~F}$ to $15 \mu \mathrm{~F}$ | 0 F to $15 \mu \mathrm{~F}$ |
| $22 \mu \mathrm{~F}$ | $15 \mu \mathrm{~F}$ to $33 \mu \mathrm{~F}$ | 0 F to $33 \mu \mathrm{~F}$ |
| $47 \mu \mathrm{~F}$ | $33 \mu \mathrm{~F}$ to $68 \mu \mathrm{~F}$ | 0 F to $68 \mu \mathrm{~F}$ |
| $100 \mu \mathrm{~F}$ | $68 \mu \mathrm{~F}$ to $150 \mu \mathrm{~F}$ | 0 F to $150 \mu \mathrm{~F}$ |
| $220 \mu \mathrm{~F}$ | $150 \mu \mathrm{~F}$ to $330 \mu \mathrm{~F}$ | 0 F to $330 \mu \mathrm{~F}$ |
| $470 \mu \mathrm{~F}$ | $330 \mu \mathrm{~F}$ to $680 \mu \mathrm{~F}$ | 0 F to $680 \mu \mathrm{~F}$ |
| 1 mF | $680 \mu \mathrm{~F}$ to 2 mF | 0 F to 2 mF |

Available measurement ranges (continued)

Table 3. Measurable capacitance ranges when measurement frequency is 1 kHz

| Measurement range setting | Recommended measurement range | Significant measurement range |
| :---: | :---: | :---: |
| 100 pF | 0 pF to 150 pF | 0 F to 150 pF |
| 220 pF | 150 pF to 330 pF | 0 F to 330 pF |
| 470 pF | 330 pF to 680 pF | 0 F to 680 pF |
| 1 nF | 680 pF to 1.5 nF | 0 F to 1.5 nF |
| 2.2 nF | 1.5 nF to 3.3 nF | 0 F to 3.3 nF |
| 4.7 nF | 3.3 nF to 6.8 nF | 0 F to 6.8 nF |
| 10 nF | 6.8 nF to 15 nF | 0 F to 15 nF |
| 22 nF | 15 nF to 33 nF | 0 F to 33 nF |
| 47 nF | 33 nF to 68 nF | 0 F to 68 nF |
| 100 nF | 68 nF to 150 nF | 0 F to 150 nF |
| 220 nF | 150 nF to 330 nF | 0 F to 330 nF |
| 470 nF | 330 nF to 680 nF | 0 F to 680 nF |
| $1 \mu \mathrm{~F}$ | 680 nF to $1.5 \mu \mathrm{~F}$ | 0 F to $1.5 \mu \mathrm{~F}$ |
| $2.2 \mu \mathrm{~F}$ | $1.5 \mu \mathrm{~F}$ to $3.3 \mu \mathrm{~F}$ | 0 F to $3.3 \mu \mathrm{~F}$ |
| $4.7 \mu \mathrm{~F}$ | $3.3 \mu \mathrm{~F}$ to $6.8 \mu \mathrm{~F}$ | 0 F to $6.8 \mu \mathrm{~F}$ |
| $10 \mu \mathrm{~F}$ | $6.8 \mu \mathrm{~F}$ to $15 \mu \mathrm{~F}$ | 0 F to $15 \mu \mathrm{~F}$ |
| $22 \mu \mathrm{~F}$ | $15 \mu \mathrm{~F}$ to $33 \mu \mathrm{~F}$ | 0 F to $33 \mu \mathrm{~F}$ |

| $100 \mu \mathrm{~F}$ | $68 \mu \mathrm{~F}$ to $200 \mu \mathrm{~F}$ | 0 F to $200 \mu \mathrm{~F}$ |

Available measurement ranges (continued)

Table 4. Measurable capacitance ranges when measurement frequency is $1 \mathrm{MHz}, 1 \mathrm{MHz} \pm 1 \%$, $1 \mathrm{MHz} \pm 2 \%$

| Measurement <br> range setting <br> 1 pF | Recommended <br> measurement range | Significant measurement <br> range |
| :--- | :--- | :--- |
| 2.2 pF | 0 F to 1.5 pF | 0 F to 1.5 pF |
| 4.7 pF | 1.5 pF to 3.3 pF | 0 F to 3.3 pF |
| 10 pF | 3.3 pF to 6.8 pF | 0 F to 6.8 pF |
| 22 pF | 6.8 pF to 15 pF | 0 F to 15 pF |
| 47 pF | 15 pF to 33 pF | 0 F to 33 pF |
| 100 pF | 33 pF to 68 pF | 0 F to 68 pF |
| 220 pF | 68 pF to 150 pF | 0 F to 150 pF |
| 470 pF | 150 pF to 330 pF | 0 F to 330 pF |
| 1 nF | 330 pF to 680 pF | 0 F to 680 pF |

Accuracy of Cp, Cs, D, G, Rs, Q and Rp

The measurement accuracy is defined when all of the following conditions are met:

- Warm-up time: 30 minutes or longer
- Ambient temperature: $18{ }^{\circ} \mathrm{C}$ to $28^{\circ} \mathrm{C}$
- Execution of OPEN Correction
- Execution of Cable Correction for 1 MHz measurement
- Measurement cable length: $0 \mathrm{~m}, 1 \mathrm{~m}$, or $2 \mathrm{~m}(16048 \mathrm{~A} / \mathrm{B} / \mathrm{D})^{1}$
$-\mathrm{D}($ dissipation factor $) \leq 0.5$

Tables 8 through 13 show the measurement accuracy of $\mathrm{Cp}, \mathrm{Cs}$, and D when $\mathrm{D} \leq 0.1$.

Table 14 shows the formula of the measurement accuracy of $\mathrm{G}, \mathrm{Rs}, \mathrm{O}$ and Rn when $\mathrm{D} \leq 0.1$.

When $0.1<\mathrm{D} \leq 0.5$, multiply the accuracy obtained in Tables 8 through 13 by the coefficient in Table 5.

Table 5. Dissipation factor Coefficient

| Parameter | Coefficient |
| :--- | :--- |
| Cp, Cs, G, Rs ${ }^{2}$ | $1+\mathrm{D}^{2}$ |
| D | $1+\mathrm{D}$ |

Table 6. Formula of the measurement accuracy of G, $R_{s^{\prime}} O$ and $R_{p}$

| Parameter | Formula |
| :--- | :--- |
| $\mathrm{G}_{\mathrm{e}}(\mathrm{G}$ accuracy $)$ | $\left(\mathrm{C}_{\mathrm{e}} / 100\right) \times 2 \times \pi \times f \times \mathrm{C}_{\mathrm{x}}$ |
| $\mathrm{Rs}_{\mathrm{e}}\left(\mathrm{R}_{\mathrm{s}}\right.$ accuracy $)$ | $\left(\mathrm{C}_{\mathrm{e}} / 100\right) /\left(2 \times \pi \times f \times \mathrm{C}_{\mathrm{x}}\right)$ |
| $\mathrm{Q}_{\mathrm{e}}(0$ accuracy $)$ | $\frac{ \pm Q x^{2} \times D e}{1 \mp 0 x \times D e}$ |
| $\mathrm{Rp}_{e}(R p$ accuracy $)$ | $\frac{ \pm R p x^{2} \times G e}{1 \mp R p x \times G e}$ |

C: Cp or Cs accuracy [\%]
f: Measurement frequency [ Hz ]
$\mathbf{C}_{\mathrm{x}}$ : Measurement value of Cp or $\mathrm{Cs}[\mathrm{F}]$
$\mathbf{0}_{\boldsymbol{x}}$ : Measurement value of 0
$R p_{\mathrm{x}}$ : Measurement value of $\mathrm{Rp}[\Omega]$
De: D accuracy [\%]

[^1]Accuracy when ambient temperature exceeds the range of $18{ }^{\circ} \mathrm{C}$ to $28^{\circ} \mathrm{C}$ (typical)

Accuracy when an Alternative Current magnetic field is applied

When the ambient temperature exceeds the range of $18{ }^{\circ} \mathrm{C}$ to $28^{\circ} \mathrm{C}$, multiply the accuracy obtained above by the coefficient shown in the table below.

Table 7. Temparature Coefficient

|  | Coefficient |
| :--- | :--- |
| $0^{\circ} \mathrm{C} \leq$ ambient temperature $<8{ }^{\circ} \mathrm{C}$ | 3 |
| $8{ }^{\circ} \mathrm{C} \leq$ ambient temperature $<18{ }^{\circ} \mathrm{C}$ | 2 |
| $18^{\circ} \mathrm{C} \leq$ ambient temperature $\leq 28^{\circ} \mathrm{C}$ | 1 |
| $28^{\circ} \mathrm{C} \leq$ ambient temperature $\leq 38^{\circ} \mathrm{C}$ | 2 |
| $38^{\circ} \mathrm{C} \leq$ ambient temperature $\leq 45^{\circ} \mathrm{C}$ | 3 |

When an alternating current magnetic field is applied to the instrument. Multiply the accuracy obtained in Tables 8 through 13.
$1+B \times(2+0.5 \times K)$
B: Magnetic flux density [Gauss]
Cx: Measured value of the capacitance (Cp or Cs),
Cr: A measurement range [F]
Vs: A measurement signal level [V].

In Tables 8 through 13, K is defined as follows:
$\mathrm{Cx} \leq \mathrm{Cr}: \mathrm{K}=(1 / \mathrm{Vs}) \times(\mathrm{Cr} / \mathrm{Cx})$
$C x>C r: K=1 / V s$
where
Cx is measured value of the capacitance ( Cp or Cs ),
Cr is a measurement range and
Vs is a measurement signal level [V].

## Measurement accuracy (continued)

Measurement time

Figure 11. Timing chart and measurement time

1. This value is defined without an extension cable.

Table 14 shows the values of T1 - T5 when the following conditions are met:

- Display update: Off
- Synchronous source: On
- Measurement range mode: Hold range mode (Hold)
- Source delay time: 0 ms
- Trigger delay time: 0 ms
- Averaging factor: 1
- SLC: Off
- Measurement time mode (N): 1
- Correction: On
- Multi connection: On
- LAN: Not connected

## Table 14. Values of T1 - T5 (typical)

|  | Measurement <br> frequency | Minimum <br> value | Typical <br> value |
| :--- | :--- | :--- | :--- |
| T1 | N/A | $1 \mu \mathrm{~s}$ | - |
| Trigger pulse width | N/A | - | $40 \mu \mathrm{~s}$ |
| T2 |  |  |  |

| Trigger wait time |  |  | $0 \mu \mathrm{Sec}$ | - |

Display time
Except in the case of the DISPLAY BLANK page, the time required to update the display on each page (display time) is as follows (Table 15). When the screen is changed, drawing time and switching time are added. The measurement display is updated about every 100 ms .

Table 15. Display time

| Item | Time |
| :--- | :--- |
| MEAS DISPLAY page drawing time | 10 ms |
| MEAS DISPLAY page (large) drawing time | 10 ms |
| BIN No. DISPLAY page drawing time | 10 ms |
| BIN COUNT DISPLAY page drawing time | 10 ms |
| Measurement display switching time | 35 ms |

Table 16 shows the measurement time $(T 3+T 4)$ for each measurement time mode.

Measurement time
Table 16. Measurement time

| Frequency | Measurement time [ms] |
| :--- | :--- |
| 120 Hz | $(\mathrm{~N} \times 8.3 \times$ Ave +2.7$) \pm 0.5$ |
| 1 kHz | $(\mathrm{N} \times 1.0 \times$ Ave +2.0$) \pm 0.5$ |
| $1 \mathrm{MHz} / 1 \mathrm{MHz} \pm 1 \% / 1 \mathrm{MHz} \pm 2 \%$ | $(\mathrm{~N} \times 1.0 \times(100 /(100+$ Fshift $)) \times$ Ave +1.3$) \pm 0.5$ |

Measurement time mode ( N ) $=1,2,4,6,8$
Ave: Averaging factor
Fshift: Frequency shift setting

Measurement data transfer time

Table 17 shows the measurement data transfer time under the following conditions. The measurement transfer time varies with the measurement conditions and computer used.

- Host computer: DELL PRECISION 390, 1.86 GHz/Windows XP
- USB GPIB Interface Card: 82350A
- USB GPIB Interface: E2078A
- Display: ON
- Measurement range mode: Hold range mode (Hold)
- OPEN/SHORT/LOAD correction: OFF
- Measurement signal monitor: OFF
- BIN count function: OFF

Table 17. Measurement data transfer time (typical)

| Interface | Data transfer format | using :FETC? command (one point measurement) |  | using : READ command (one point measurement) |  | using data buffer memory (1000 measurement points (BUFFER3)) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Comparator ON [ms] | Comparator OFF [ms] | Comparator ON [ms] | Comparator OFF [ms] | Comparator ON [ms] | Comparator OFF [ms] |
| GPIB | ASCII | 1 | 1 | 3 | 3 | 202 | 186 |

## Measurement Assistance Functions

Measurement assistance functions

| Correction function | - OPEN/SHORT/LOAD Correction are available <br> - The OFFSET Correction is available |
| :---: | :---: |
| MULTI Correction function | - OPEN/SHORT/LOAD Correction for 256 channels <br> - The LOAD Correction standard value can be defined for each channel |
| Cable Correction funtion | Cable Correction is available |
| Deviation measurement function | Deviation from reference value and percentage of deviation from the reference value can be outputted as the result |
| Comparator function | - BIN sort: The primary parameter can be sorted into 9 BINs, OUT_OF_BINS, AUX_BIN, and LOWC_OR_NC. The secondary parameter can be sorted into High, In, and Low. <br> - Limit setup: An absolute value, deviation value, and \% deviation value can be used for setup <br> - Bin count: Countable from 0 to 999999 |
| Low C reject function | Extremely low measured capacitance values can be automatically detected as measurement errors |
| Contact check function | The contact check function is available on 120 Hz and 1 kHz |
| Single Level Compensation | - SLC function compensates the voltage drop by the resistance inside the E4981A and the extension cable under the following frequencies and ranges <br> - Measurement cable: 16048A or 16048D <br> - When the measurement frequency is $120 \mathrm{~Hz}: 220 \mu \mathrm{~F}$ range, $470 \mu \mathrm{~F}$ range, 1 mF range <br> - When the measurement frequency is $1 \mathrm{kHz}: 22 \mu \mathrm{~F}$ range, $47 \mu \mathrm{~F}$ range, $100 \mu \mathrm{~F}$ range |

| Measurement signal level monitor function | - Measurement voltage and measurement current can be monitored <br> - Level monitor accuracy (typical): $\pm(3 \%+1 \mathrm{mV})$ |
| :---: | :---: |
| Data buffer function | Up to 1000 measurement results can be read out in batch |
| Save/recall function | - Up to 10 setup conditions can be written to/read from the built-in nonvolatile memory <br> - Up to 10 setup conditions can be written to/read from the external USB memory <br> - Auto recall function can be performed when the setting conditions are written to Register 9 in the built-in non-volatile memory |
| Key lock function | The front panel keys can be locked |
| GPIB interface | Complies with IEEE488.1, 2 and SCPI |
| USB host port | Universal serial bus jack, type-A (4 contact positions, contact 1 is on your left); female; for connection to USB memory device only <br> Note: The following USB memory can be used. <br> - Complies with USB 1.1; mass storage class, FAT16/FAT32 format; maximum consumption current is below 500 mA <br> - Recommended USB memory: 4 GB USB Flash memory (Keysight PN 1819-0637) <br> - Use the prepared USB memory device exclusively for the E4981A; otherwise, other previously saved data may be cleared. If you use a USB memory other than the recommended device, data may not be saved or recalled normally. <br> - Keysight will NOT be responsible for data loss in the USB memory caused by using the E4981A |
| USB interface port | - Universal serial bus jack, type mini-B (4 contact positions); complies with USBTMC-USB488 and USB 2.0; female; for connection to the external controller. <br> - USBTMC: Abbreviation for USB Test \& Measurement Class |
| LAN interface | - 10/100 BaseT Ethernet, 8 pins; two speed options <br> - Compliant with LXI standard (LAN eXtensions for Instrumentation): Version 1.2, Class C <br> - Auto MDIX |
| Handler interface | The input/output signals are negative logic and optically isolated open collector signals <br> - Output signal: Bin1-Bin9, Out of Bins, Aux Bin, P-Hi, P-Lo, S-Reject, INDEX, EOM, Alarm, OVLD, <br> Low C Reject or No Contact, Ready_For_Trigger <br> - Input signal: Keylock, Ext-Trigger |
| Scanner interface | The input/output signals are negative logic and optically isolated open collector signals <br> - Output signal: INDEX, EOM <br> - Input signal: Ch0 - Ch7, Ch valid, Ext-Trigger |
| Measurement circuit protection | The maximum discharge withstand voltage, where the internal circuit remains protected if a charged capacitor is connected to the UNKNOWN terminal, is illustrated below. NOTE: Discharge capacitors before connecting them to the UNKNOWN terminal or a test fixture. <br> Table 18. Maximum discharge withstand voltage (typical) |
|  | Maximum discharge withstand voltage Range of capacitance value C of DUT |
|  | 1000 V |
|  | $\overline{\sqrt{2 / C} \mathrm{~V}} \mathrm{C} \geq 2 \mu \mathrm{~F}$ |

## Sample Calculation of Measurement Accuracy

This section describes an example for calculating the measurement accuracy of each measurement parameter, assuming the following measurement conditions

Sample

- Measurement signal frequency: 1 kHz
- Measurement signal level: 0.5 V
- Measurement range: 10 nF
- Measurement time mode: $\mathrm{N}=1$
- Ambient temperature: $28^{\circ} \mathrm{C}$

When measurement
parameter is Cp-D (or Cs-D)

The following is an example for calculating the accuracy of Cp (or Cs ) and D , assuming that measured result of Cp (or Cs ) is 8.00000 nF and measured result of D is 0.01000 .

From Table 7, the equation to calculate the accuracy of Cp (or Cs ) is
$0.055+0.030 \times K$
and the equation to calculate the accuracy of $D$ is
$0.00035+0.00030 \times K$

The measurement signal level is 0.5 , the measurement range is 10 nF , and the measured result of Cp (or Cs ) is 8.00000 nF . Therefore,
$K=(1 / 0.5) \times(10 / 8.00000)=2.5$
Substitute this result into the equation. As a result, the accuracy of Cp (or Cs ) is $0.055+0.030 \times 2.5=0.13 \%$
and the accuracy of $D$ is
$0.00035+0.00030 \times 2.5=0.0011$

Therefore, the true Cp (or Cs ) value exists within
$8.00000 \pm(8.00000 \times 0.13 / 100)=8.00000 \pm 0.0104 \mathrm{nF}$
that is,
7.9896 nF to 8.0104 nF and the true $D$ value exists within
$0.01000 \pm 0.0011$
that is,
0.0089 to 0.0111

When measurement
parameter is $\mathrm{Cp}-\mathrm{Q}$ (or Cs-Q)

The following is an example for calculating the accuracy of Cp (or Cs ) and 0 , assuming that measured result of Cp (or Cs ) is 8.00000 nF and measured result of O is 20.0.

The accuracy of $C p$ (or $C s$ ) is the same as that in the example of $C p-D$.

From Table 8, the equation to calculate the accuracy of $D$ is
$0.00035+0.00030 \times K$

Substitute $K=2.5$ (same as $C p-D$ ) into this equation.
The accuracy of $D$ is
$0.00035+0.00030 \times 2.5=0.0011$

Then, substitute the obtained $D$ accuracy into Equation 1. The accuracy of 0 is
$\pm(20.0)^{2} \times 0.0011 /(1 \mp 20.0 \times 0.0011)= \pm 0.44 /(1 \mp 0.022)$
that is,
-0.43 to 0.45

Therefore, the true 0 value exists within the range of
19.57 to 20.45

When measurement parameter is $\mathrm{Cp}-\mathrm{G}$

The following is an example for calculating the accuracy of Cp and G , assuming that measured result of Cp is 8.00000 nF and measured result of G is $1.00000 \mu \mathrm{~S}$.

The accuracy of $C p$ is the same as that in the example of $C p-D$.
From Table 11, the equation to calculate the accuracy of $G$ is
$(3.5+2.0 \times K) \times C x$

Substitute K = 2.5 (same as $\mathrm{Cp}-\mathrm{D}$ ) and 8.00000 nF of the measured Cp result into this equation.

The accuracy of G is $(3.5+2.0 \times 2.5) \times 8.00000=68 \mathrm{nS}(0.068 \mu \mathrm{~S})$

Therefore, the true $G$ value exists within
$1.00000 \pm 0.068 \mu \mathrm{~S}$
that is,
$0.932 \mu \mathrm{~S}$ to $1.068 \mu \mathrm{~S}$

When measurement parameter is $\mathrm{Cp}-\mathrm{Rp}$

The following is an example for calculating the accuracy of $C p$ and $R p$, assuming that measured result of Cp is 8.00000 nF and measured result of Rp is $2.00000 \mathrm{M} \Omega$.

The accuracy of $C p$ is the same as that in the example of $C p-D$.
From Table 11 the equation to calculate the accuracy of $G$ is
$(3.5+2.0 \times K) \times C x$
Substitute $\mathrm{K}=2.5$ (same as $\mathrm{Cp}-\mathrm{D}$ ) and 8.00000 nF of the measured Cp result into this equation.

The accuracy of G is
$(3.5+2.0 \times 2.5) \times 8.00000=68 \mathrm{nS}$
Then, substitute the obtained G accuracy into Equation 2. The accuracy of $R p$ is
$\pm\left(2 \times 10^{6}\right)^{2} \times 68 \times 10^{-9} /\left(1 \mp 2 \times 10^{6} \times 68 \times 10^{-9}\right)= \pm 0.272 \times 10^{6} /(1 \mp 0.136)$
that is,
$-0.23944 \mathrm{M} \Omega$ to $0.31481 \mathrm{M} \Omega$

Therefore, the true $R p$ value exists within
$1.76056 \mathrm{M} \Omega$ to $2.31481 \mathrm{M} \Omega$

When measurement parameter is Cs-Rs

The following is an example for calculating the accuracy of $C p$ and Rs, assuming that measured result of Cs is 8.00000 nF and measured result of Rs is $4.00000 \mathrm{k} \Omega$.

Because the Cs accuracy is
$D=2 \times \pi \times$ Freq $\times C s \times R p=2 \times \pi \times 10^{3} \times 8 \times 10^{-9} \times 4 \times 10^{3}=0.2>0.1$
multiply $0.13 \%$ (the result obtained for Cs-D) by $1+\mathrm{D} 2$.

The result is
$0.13 \times(1+0.22)=0.1352 \%$
From Table 11 the equation to calculate the accuracy of Rs is
$(90+50 \times K) / C x$
Substitute $\mathrm{K}=2.5$ (same as $\mathrm{Cs}-\mathrm{D}$ ) and 8.00000 nF of the measured Cs result into this equation.

The accuracy of G is
$(90+50 \times 2.5) / 8.00000=26.875 \Omega$
Because $\mathrm{D}>0.1$, multiply the result by $1+\mathrm{D} 2$ as in the case of Cs . The final result is $27.95 \Omega$.

Therefore, the true Cs value exists within
$8.00000 \pm(8.00000 \times 0.1352 / 100)=8.00000 \pm 0.01082 \mathrm{nF}$
that is,
7.98918 nF to 8.01082 nF
and the true Rs value exists within
$4.00000 \pm 0.02795 \mathrm{k} \Omega$
that is,
3.97205 to $4.02795 \mathrm{k} \Omega$
